of donors with active replication of known viruses. Inactive proviruses can be detected and inactivated, allowing identification and elimination of potential human pathogens derived from swine in a manner not possible in the outbred human organ donor population and is important to the development of human xenotransplantation

The invention relates to purified nucleic acid molecule that can specifically hybridise with the sequence of swine retroviruses. The nucleic acid is useful in methods for determining the copy number or nucleic acid is useful in methods for: determining the copy number or care a proxime retrovirus from a human; screening a cell, tissue or human being for the presence or expression of a porcine retrovirus or retroviral sequence; assessing the potential risk associated with the transplantation of a graft from a donor miniature swine or swine retrovirus or retroviral sequence genome includes a mutation that modulates its expression; providing a swine free of an endogenous retrovirus or retrovirus squence; evaluating a treatment for the ability to activate a retrovirus; localising the origin of a porcine retrovirus; and inhibiting expression of an endogenous porcine retrovirus; and detecting a recombinant virus or other pathogens, e.g. protozoa or fungi. The present sequence represents miniature swine retrovirus; considering the origin of a porcine retrovirus;
                                                                              New purified nucleic acid molecules that specifically hybridize with swine retroviral sequences, useful for detecting the presence of porcine retrovirus, e.g., for assessing the potential risk associated with the
                                                                                                                                                                                                                          Claim 6; SEQ ID NO 3; 82pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the swine retroviral polypeptides and their encoding nucleic acids. The methods and compositions of the present invention are useful for screening a cell or tissue, e.g. a heart, lung, liver, bone marrow, kidney, brain cells, neural tissue, pancreas and intestinal tissue xenograft, for the presence or expression of a swine or miniature swine retrovirus or retroviral sequence. The invention is also activate a retrovirus such as an endogenous porcine retrovirus. The invention is also useful in gene therapy. The present sequence is the swine retroviral genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

```
This cDNA sequence represents a porcine retrovirus from miniature swine containing the putative coding regions for viral GAG, POL and ENV containing the putative coding regions for viral GAG, POL and ENV controls. This sequence and POR fragments generated from it (see AAT74812 T74882) can be used to screen organs for the presence of porcine retroviruses prior to xenotransplantation. Transplantation can increase the likelihood of retroviral activation if intext and infectious proviruses are present. The porcine retroviral sequence can be used to generate probes to determine the level (e.g. copy number) of intext (i.e. potentially replicating) porcine provirus sequences in a strain of contentially replicating porcine provirus sequences in a strain of contential lesions or viral recombinants and also to determine the histological localisation of activated retrovirus. Using Polymerase Chain thration and susceptibility testing can be performed. Ultimately animal donors without intext porcine retroviral sequences or a lower copy number of viral elements could be selected. (Updated on 27-AUG-2003 to correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TTTTGTGTGTCTTTGTCTTGTGTCCTTGTCTACAGTTTTAATATGGGACAGACGGTGA 600

This invention describes novel replication-competent molecular clones of porcine endogenous retrovirus (PERV) isolated from a porcine BAC (C Charterial artificial arthromosome) library which are replication competent after transfer into permissive cells. The invention also discloses (a) env and gag polypeptides encoded by the molecular clones of the invention of sequences of the integration site of a replication competent molecular clone in the porcine genome; (c) oligonucleotides for detecting sequences of the integrated PERV; (d) a method for detecting experience of infectious PERV particles in a sample; (e) a vaccine for immunization against replication competent PERV, comprising an env protein and (f) a method for isolating competent PERV, comprising an env protein and (f) a method for isolating competent PERV, comprising an env protein and (f) a method for isolating competent PERV, comprising an env protein and (f) a method for isolating competent pervices of the invention are charmed activity. The clones are from native PERV and make possible comparisons of proviral sequences of different origins at the molecular, comparisons of proviral sequences of different origins at the molecular, correctural and callular levels, and mapping of proviral sequences at the clones of the invention are useful for comparisons against replication-competent perv or protection against replication-competent form the products of the invention are useful for protection against replication-competent, full-length, proviral constant a pervice of the invention are produced by the clones of the invention are useful for protection against replication-competent, full-length, proviral constants a pervice of the invention are perpendents a PERV. The products of the invention are perpendents a PERV. The products of the invention are perpendents a pervice of the invention are perpendents a PERV. The product of the invention are perpendents a PERV. The product of the invention are perpendents and perpendents and perpendents and perpendents 1037 349 409 469 619 229 289 917 797 857 858 écréricircadacceraaceacrececeacrerearcaccacacerecraceacearc 679 GATTŤTAACTCGAČTGGCCŤŤTČÁGŤTGČTGGTTGGČCĞĞGAAACCČĞĞĞAĞTAČČČ TAACACCCGAGAACCGACTTGGAGGTAAAAGGATCCTCTTTTTAACGTGT--ATGCATG 230 TACCGGCCCCGCCTCTCTGTTTCTGTTTTTCAGTGCTGCCCCTTTCGCTTTGCA reresecrescerererererastrerereritreserarisceeritreserriteser GCTGTCCTCTCAGGCCGTAAGGGCTGGGGACTGTGATCAGCAGACGTGCTAGGAGGATC 918 ACAGGCTGCCACCCTGGGGGACGCCCCGGGAGGTGGGGAGGCCAGGGACGCCTGGTGGT 978 crecrrererescreasesacesacricierieriesasecesasecricecereces ----TICITITIGCIGGICITACATITIGGGGCTCGTCCGGGATCTGTCGCGGCCACCCC CTCCTACTGTCGGTCAGAGGACCGAATTCTGTTGCTGAAGCGAAAGCTTCCCCCTCCGCG GCGTGGTGTACGACTGTGGGCCCCCAGCGCGCTTGGAATAAAAATCCTTGCTGTTTGCA TCAAGACCGCTTCTCGTGAGTGATTAAGGGGAGTCGCCTTTTCCGAGCCTGGAGG----ACAGGCTGCTGCCCTGGGGGACGCCCCGGGAGGTGAGGAGGAGGCCAGGGACGCCTGGTGGT Gaps Sequence 8918 BP; 2435 A; 2174 C; 2253 G; 2056 T; 0 U; 0 Other; Indels 164; ; 548; DB ; Score 6931.2; ; Pred. This invention describes novel replication-competent molecular clones of porcine endogenous retrovirus (PERV) isolated from a porcine BAC (C (bacterial artificial athromosome) library which are replication competent after transfer into permissive cells. The invention also discloses (a) env and gag polypeptides encoded by the molecular clones of the invention of a replication competent molecular clone in the porcine genome; (c) oligonucleotides for detecting sequences of the integrated PERV; (d) a method for detecting appearance of infectious PERV (c) a method for detecting appearance of infectious PERV (c) a vaccine for immunization against replication competent PERV, comprising an env protein and (f) a method for isolating the molecular clones of the invention. The products of the invention are competent PERV, comprising an env protein and (f) a method for isolating the molecular clones of the invention. The products of the invention are comperisons of proviral sequences of different origins at the molecular, structural and cellular levels, and mapping of proviral sequences at comparisons of proviral sequences of different origins at the molecular, comparisons of proviral sequences of the invention are useful for protection against replication-competent PERV. The products of the invention are functional, replication-competent, full-length, proviral colones isolated directly from the pig genome, i.e. they are 'native' colones isolated directly from the pig genome, i.e. they are 'native' colones isolated directly from the pig genome, i.e. they are 'native' colones isolated the invention are perfected in the product of the invention are perfected in the product of the invention are perfected to the invention are perfected in the product of the invention are perfected in the product of the invention are perfected in the

                                                   The present invention provides a method to prevent the transmission of infectious agents during xenotransplantation. This involves introducing to donor swine cells a recombinant DNA encoding a peptide fragment from the infectious agent, and then introducing these cells into the

This invention describes novel replication-competent molecular clones of porcine endogenous retrovirus (PERV) isolated from a porcine BAC (bacterial artificial chromosome) library which are replication competent after transfer into permissive cells. The invention also discloses (a) env and gag polypeptides encoded by the molecular clones of the invention; (b) porcine nucleic acids that represent the 5' and 3' flanking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Replication-competent molecular clones of porcine endogenous retrovirus, useful as sources of env peptides for vaccination and for viral detection.

Mon

sequences of the integration site of a replication competent molecular clone in the porcine genome; (c) oligonucleotides for detecting clone in the porcine genome; (c) oligonucleotides for detecting spearance of infectious PERV competent a sample; (e) a waccine for immunization against replication competent PERV, comprising an env protein and (f) a method for isolating the molecular clones of the invention. The products of the invention are comparisons of proviral sequences of different origins at the molecular, structural and callular levels, and mapping of proviral sequences at chromosomal positions in specific breeds of pigs. Also different breeds configurately PERV-free animals. Also vaccines that contain the env configuration are functional, replication-competent, full-length, proviral clones isolated directly from the pig genome, i.e. they are 'native' prove solated directly from the pig genome, i.e. they are 'native' prover of the invention are functional, replication-competent, full-length, proviral clones isolated directly from the pig genome, i.e. they are 'native' prover of the invention are functional, replication-competent sexible in the constant of the invention are functional, replication-competent (i.e. they are 'native' prover of the invention are functional, replication-competent fasment described in the constant of the invention are functional, replicating from the pig genome, i.e. they are 'native' prover the pig genome are the pig genome, i.e. they are 'native' prover the pig genome are the pig genome, i.e. they are 'native' prover the pig genome are the pig genome, i.e. they are 'native' prover the pig genome are the pig genome ar

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         833
                 Polynucleotide encoding porcine retrovirus expression product - useful to develop products for use in vaccines, diagnosis and xeno-transplantation.
                                                                                This DNA sequence encodes the porcine retrovirus (PoEV) virion core polypeptide (GAG), polymerase (POL) and envelope (ENV) proteins and also includes the Long Terminal Repeat (LTR). These proteins can be used to develop viral vaccines, antisence of ancieic acids, ribozymes and other antiviral agents. They can also be used in xeno-transplantation technology and as diagnostic tools. (Updated on 27-AUG-2003 to correct OS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 296
Porcine retrovirus, PoEV, POL protein; ENV protein; GAG protein, vaccine; diagnosis; xenotransplantation; prophylactic; therapeutic; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotide encoding porcine retrovirus expression product - useful to develop products for use in vaccines, diagnosis and xeno-transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA sequence encodes the porcine retrovirus (PoEV) virion core polypeptide (GAG), polymerase (POL) and envelope (ENV) proteins. These proteins can be used to develop viral vaccines, antisense nucleic acids, ribozymes and other antiviral agents. They can also be used in xenctransplantation technology and as diagnostic tools.                                                                                                                                                                                           The present invention provides a method to prevent the transmission of infectious agents during xenotransplantation. This involves introducing to donor swine cells a recombinant DNA encoding a peptide fragment from the infectious agent, and then introducing these cells into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting or preventing infectious agent transmission in mammalian transplant recipients, by introducing recombinant DNA comprising DNA encoding extracellular proteins of the agent into donor cells, such as

This sequence represents the putative coding regions for viral proteins

Taukuba-1 and contains the putative coding regions for viral proteins

Cand, PoL and ENV. This sequence and PCR fragments generated from the

sequence (see AAT74812-T74882) could be used to screen organs for porcine

retroviruses prior to xenotransplantation. Transplantation can increase

the likelihood of retroviral activation if intext and infectious

creproviruses are present. The porcine retroviral sequence can be used to

generate probes to determine the level (e.g. copy number) of intext (i.e.

potentially replicating) porcine provirus sequences in a strain of

contentially replicating operate provirus sequences in a strain of

contential sequence of activated retrovirus. Using Polymerase Chain Reaction DNA

contentiation (PDQ) on blood mononuclear cells, infectivity tirration and

susceptibility testing can be performed. Ultimately animal donors without

cintact porcine retroviral sequences or with a lower copy number of viral

clements could be selected. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid from porcine retro:viruses - used for detecting viruses in transplant or other tissue and for assessing risk of transmitting
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Retrovirus; porcine; GAG protein; POL protein; ENV protein; xenotransplantation; infectious; provirus; organ transplant; donor; activated virus; Tsukuba-1; PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 8060 BP; 2233 A; 1959 C; 2012 G; 1856 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for screening a cell or tissue for the presence or expression of a retrovirus (RV), comprising contacting a target nucleic acid from the cell or tissue with a second nucleic acid from the present invention (e.g. the present sequence or a fragment thereof). The method is useful for RV detection and to assess graft transplantation risk. Screening of animals allows the elimination of donors with active replication of known viruses. Inactive proviruses can be detected and inactivated, allowing identification and elimination of potential human pathogens derived from swine in a manner not possible development of human corpuration. The invention relates to purified nucleic acid molecule that can specifically hybridise with the sequence of swine retroviruses. The nucleic acid is useful in methods for: determining the copy number or size of a porcine retrovirus from a human; screening a cell, tissue or a human being for the presence or expression of a porcine retrovirus or certoviral sequence; assessing the potential risk associated with the transplantation of a graft from a donor miniature swine or swine retrovirus or recipient animal or human; determining if an endogenous miniature swine or swine retrovirus or retroviral sequence genome includes a mutation that modulates its expression; providing a swine free of an endogenous retrovirus or retrovirus; localising the origin of a porcine retroviral infection; and inhibiting expression of an endogenous porcine retrovirus; and detecting a recombinant virus or other pathogens, e.g. protozoa or fungi. The present sequence represents porcine retrovirus; Tsukuba-1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New purified nucleic acid molecules that specifically hybridize with swine retroviral sequences, useful for detecting the presence of porcine retrovirus, e.g., for assessing the potential risk associated with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2588 TCAAGACCGCTTCTCGTGAGTGATTAAGGGGAGTCGCCTTTTCCGAGCCTGGAGGTTCTT
